The 4 Biggest Accounts Receivable Benefits of Paymode-X

Getting paid remains as essential today as it was millennia ago. It’s just that how you get paid is changing, and those changes offer opportunities that have never existed for accounts receivable before.

In a world where 93% of businesses experience late payments from customers\(^1\) and fraud is a major concern, the days of waiting around for a paper check are coming to an end. The new and better way forward involves automated payments and key AR tools that streamline and secure your receivables processes.

Here are four major benefits your organization realizes when they receive electronic payments through Paymode-X.

**DSO**

Achieve faster, more secure payments

You want to get paid faster, and your payers want to unlock early payment discounts. In fact, **52% of businesses say they struggle with the timely approvals they need internally to pay you on time or early.** A recent poll of Paymode-X vendors like you showed that **61% considered DSO to be their biggest problem area** within accounts receivable.

Fortunately, Paymode-X addresses that directly by eliminating mail float on check payments, providing you with a payment tracker to ensure you have visibility into payment status and forecasting, and offering payer-specific incentives, including faster payment timing and extended payment terms.

**Security**

Protect against an ever-evolving fraud landscape

As long as there have been checks, there has been check fraud. Changing to a new payment method can seem like a hassle in the early going, but the reality is that **79% of organizations were victims of payment fraud\(^2\)** in the past year, and check payments were the major culprit.

With direct deposit and electronic payment offerings, secure multi-factor authentication and biometrics to help ensure both payers and vendors are who they say they are, and more, you can bring peace of mind to your AR function.

Visibility
Enhance your AR function with better data and reporting
Access to critical payment data, remittance, and reporting while on the go has become increasingly vital for AR staff who find themselves working at odd hours, on the road, or in the midst of meetings. In fact, 41% of executives identified a lack of visibility into receivables as a top cash management challenge. (Smart Payments)

Paymode-X enhances receivables by offering easier access to that data, allowing users to receive detailed remittance via email, check payment and invoice delivery status via a mobile app, and the ability to pull reports by customer with the press of a button.

Automation
Reduce your AR workload and focus on the big picture
The final benefit might be the most attractive for time-strapped AR departments. More than 30% of businesses consider payment receipt and reconciliation one of their company’s most inefficient components, probably because spreadsheets still rule the day.

Automating manual cash posting through CTX/EDI 820, enhancing your reporting to prevent manual pulling for data, sending electronic invoices, and generally taking the tedious manual work out of your day-to-day responsibilities can result in more time for the organization’s top priorities.
